

Who are your 2 possible subjects and why?

Professor WoodWorth: I want to interview Professor Woodworth. She is currently my Environmental professor and I am not the biggest science person so when I had to take this class I was nervous, But I really started to enjoy it and look forward to the class. She has had such an interesting travel journey that I think is very interesting to learn about. It would be great to talk about her time living in Africa and how she ended up at UNE.

Professor Paterson: I think Professor Paterson would be an interesting person to write about. He has previously auditioned for SNL and has taught at UNH and SMCC. He always keeps class interesting and 1hr and 20 minutes go by so fast when in his class because he likes to keep it fun.

What is the angle or approach for each subject? What makes this interesting?

I want to take a positive light on Professor Woodworth. She has had such an interesting career with traveling so much and being really into climate change. Learning about all her travels and what she has learned. Learning about her role as Marine and Environmental Programs Coordinator would be great to know about, and how she has handled it. What I really want to highlight though is her time in Africa and what it was like for her.

Professor Paterson has such interesting teaching ways and it makes his classes so fun. I think diving deeper into how he preps for his classes and how he decides what to do would be so interesting. It would also be great to talk about his time auditioning for SNL and how he includes that part of his life into his teaching. He also wrote two books so learning about his process for that would be interesting

Based on your research, what questions might you ask?

Professor Woodworth

- What made you move to Africa?
- What drew you to UNE?
- Do you plan on continuing to teach environmental science?
- Did you bring things you learned from Africa into the classroom?
- What advice Do you have for someone who wants to continue their passion with Environmental science?

Professor Paterson:

- Did you always want to be a professor?
- What made you start teaching at UNE? Do you enjoy teaching at other schools as well?
- What is something you want students to take away from your class?

- How did you get into writing your books? Is that something you wish to continue to do?
